Who are AI tools being built for?

AI tool builders optimize for:

 - Their internal use case (dogfooding)

 - Their largest revenue sources (corporations)

By default, independent researchers get left behind.

Why this happens

Big orgs build up: skills, plugins, instructions,

accumulated knowledge.

This gets distributed automatically to their AI agents.

It's continuous learning in practice.

Independents don't have this. The gap will widen.

Soft takeoff has started. Now is the time.

AI is already accelerating research.

Alignment work needs this acceleration too.

The field is:

- Distributed across small teams & independents

- Working on urgent problems

- Not big enough to build custom infra

alignment-hive

Shared infrastructure for alignment researchers

 - Plugin marketplace for Claude Code

 - Curated skills for common research workflows

 - hive-mind: sharing session learnings (in dev)

github.com/Crazytieguy/alignment-hive

Start today

MATS plugin includes:

  - project-setup: architecture decisions for new projects

  - fellow-handbook: MATS policies, compute, housing

One command to install:

```
/plugin install mats@alignment-hive
```

Let's build this together

1. Try it
/plugin install mats@alignment-hive

2. Give feedback
What's friction? What do you need?

3. Pair with me
Let me watch the tools in action

4. Contribute
Talk to me if interested
